Codes extracted from C3 Interview Question (Teammates concerns with code smells)							
Interviewee	Raw answer (full)	Text snippet 1		Text snippet 2		Text snippet 3	
		Raw answer	Code	Raw answer	Code	Raw answer	Code
I1	Yes, I do believe so. Although many times we have to deal with a not properly maintained code base; Legacy code, specially the companies first and/or core products tend to have been written with looser code rules to prioritize delivery speed						
I2	A1: No, at least not as much. A2: I believe they think of them as a long list of "don't"s to not reproduce when writing code.	I believe they think of them as a long list of "don't"s to not reproduce when writing code.	Code smells seen simply as a list of don'ts				
I3	A1: Half of them do. The others, I'm not sure, I'd say no A2: We should pay attention to them while creating new features, but not spend too much resources for analyzing existing code	We should pay attention to them while creating new features, but not spend too much resources for analyzing existing code	Code smell analysis is costly and not a priority				
I4	Yes, I do. I normally believe that all of my teammates strive to use good practices while coding. We also review each other's code, so "code smell" normally doesn't make it to the final product.	[...] I normally believe that all of my teammates strive to use good practices while coding	Developers strive to use good development practices	[...] We also review each other's code, so "code smell" normally doesn't make it to the final product.	Team performs code review		

I5	A1: No, I don't. As my work is more related to maintaining what we already have, sometimes I face codes that are almost impossible to understand. Sure I understand what is going on, but it may take a while. I think they're more focused on delivering what the client asked for, That's not wrong, but I think we should deliver in the best possible way. A2: I think they know what they're doing, and they know when the solution is not the greatest and sometimes we have code smells, that's something normal.	[...] I face codes that are almost impossible to understand.	Teammates' code is hard to understand	[...] I think they're more focused on delivering what the client asked for	Delivery over quality	I think they know what they're doing, and they know when the solution is not the greatest and sometimes we have code smells, that's something normal	Code smells occurrence normalization
I6	A1: Not all of them A2: Maybe they don't see the direct impact that could cause, and they care more about delivering	Maybe they don't see the direct impact that could cause	Not knowing code smells impacts	[...] they care more about delivering	Delivery over quality		
I7	Yep. It comes up a lot in code reviews. I'd say it is almost an informal requirement for the selection process for the company.	[...] I'd say it is almost an informal requirement for the selection process for the company	Concern about code smells as a requirement to work	It comes up a lot in code reviews.	Team performs code review
